

Targeted feasibility boundary on the corrected 325557 graph; each configuration n=1. Wall-clock times are single-run feasibility values at different requested batches and are NOT a performance comparison. Max successful requested batch is within the tested range only (Pure 4096 < UM 10240 < Chunked 16384); Chunked was tested to 16384 and this is no unlimited-capacity claim. Points are not connected (unmeasured batches were not measured).
